

NAMAN MANOCHA

AGENTIC AI ENGINEER — Multi-Agent Systems & Forward-Deployed Engineering

Kolkata, India | 8530356515 | namanmanocha42248@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

AI engineer who owns problems end-to-end — from scoping requirements with real users to shipping and operating the deployed system. Solo-built **TalentOS**, a dual-pipeline autonomous agent platform (Google ADK + LangGraph) with human-in-the-loop guardrails, and **FundersAI**, powered by a multi-agent pipeline with a router agent that classifies intent. Independently builds and ships these end-to-end after working as solo tech lead at PayGain — repeatedly the sole engineer turning ambiguous business needs into working software in front of clients.

TECHNICAL SKILLS

Agentic AI: LangGraph, Google ADK, RAG, Prompt Engineering, LLM Routing, Langfuse

Engineering & Cloud: Python, FastAPI, REST APIs, PostgreSQL, Supabase, Docker, Kubernetes, AWS EC2, GitHub Actions, Google Cloud Run

Web & Data: Next.js, React, TypeScript, ETL Pipelines, Data Validation

EXPERIENCE

Artificial Intelligence Intern — Internmo (Remote)

Sept 2026 – Present

- Sole engineer on three client-style ML projects, PRD to dashboard: Vantara (churn and 90-day customer value; SHAP/LIME, FastAPI, Docker), FlowCast (traffic and accident-risk forecasting), Northgate (stock forecasting with FinBERT sentiment, max-Sharpe portfolio).

Technology Manager — PayGain Multiservices Pvt. Ltd.

Feb 2025 – Sept 2026

Kolkata, India

- Sole owner of requirements and design for a company-wide mobile app spanning client/employee onboarding, document access, product activation, training, and payments.
- Worked directly with business stakeholders to translate requirements into deployed systems — lead-capture automation (Make), company website (30+ client conversions), and 20+ live technical presentations simplifying investment/insurance products for 300+ seminar attendees.

INDEPENDENT PROJECTS

FundersAI — AI-Powered Research Platform for Indian Stocks & Mutual Funds

fundersai.co.in

Python, FastAPI, Next.js, LangGraph, Groq, OpenAI | ~144K source LOC, 856 files, 442 commits, 178 test files — OpenAI Build Week | Live: www.fundersai.co.in | Repo: github.com/Naman6019/FundersAI

- Multi-Agent Orchestration:** designed a custom multi-agent pipeline (Planner → Quant → Research → Synthesis agents) with shared state, where a Groq-hosted LLM router agent classifies query intent and directs execution across stock, mutual-fund, comparison, and market-news paths.
- End-to-End Ownership:** designed and operated the citation-grounded research workflow across data, ML, backend, frontend, CI/CD, and a separately deployed report-synthesis service.

TalentOS — Autonomous Opportunity Intelligence Platform (All Things Agentic Hackathon)

Python, Google ADK, LangGraph, Next.js, Firestore, Google Cloud Run | ~21K source LOC across 116 files, 70 commits, 26 test files | Live: all-things-agentic--allthingsage.com | Repo: github.com/Naman6019/all-things-agentic

- Dual-Pipeline Agent System:** built Careers and Studio workflows with LangGraph and Google ADK agents, ingesting ~2,900 postings/run across 4 ATS platforms and 4 aggregator feeds into reviewable outputs.
- Cost-Disciplined Evaluation:** applied deterministic title/seniority pre-filtering that eliminates 89.5% of postings before any LLM call, then used evaluator and drafter steps to prepare reviewable application materials.
- Guardrails & Ownership:** shipped human-in-the-loop send gates, compliance checks, Langfuse observability, Cloud Run deployment, and a 373-test hermetic offline suite running in ~11s.

CareFlow Intelligence — Agentic RAG & Fine-Tuning System

Python, FastAPI, Next.js, Supabase/pgvector, ChromaDB, Unsloth, Ollama | ~7,300 LOC, non-clinical, synthetic-data-only

- Second Agent System:** built citation-grounded document RAG with automated ingestion and approval gates; fine-tuned Qwen2.5-1.5B via 4-bit QLoRA (r=16, alpha=16) and served it locally via Ollama.

GitResume — Autonomous Resume & Portfolio Intelligence Agent

Python, Typer, Rich, Ollama, python-docx | ~4K LOC across 23 files, 28 commits | Repo: github.com/Naman6019/git-resume-agent

Self-built a multi-agent pipeline (Inspector → SchemaDiscoverer → Synthesizer → GroundingVerifier) that scans git history/AST, synthesizes quantified resume bullets via LLM, and adversarially verifies every metric against commit diffs before compiling to Word/PDF with native hyperlinks — published to PyPI as git-resume-agent; runs on every commit via a git hook.

EDUCATION & ACHIEVEMENTS

B.Tech, Computer Science Engineering (AI & ML Specialization) — VIT Amaravati

June 2021 – Sept 2025

CGPA: 8.2/10 | Published research paper on QA/NLP | Certifications: Azure Administrator Associate, AWS Certified Cloud Practitioner
